▶▶▶ introduction

The world has changed and the demands of the engineering professions have changed. Modern engineering requires not only traditional engineers who are able to conceptualize and design technical devices or systems, but also knowledgeable professionals who are able to apply engineering principles, sciences and modern technology to implement, solve, extend and improve existing technology for the benefit of humanity. These knowledgeable professionals are engineering technologists who are vital members of an engineering team.

Engineering technology emphasizes the application of existing scientific and engineering techniques to a variety of real world problems. Engineering technology education focuses primarily on the applied aspects of science, mathematics and engineering principles aimed at preparing graduates for the practice of engineering job spectrum closest to product development and improvement, industrial processes, operational functions and services.

The contributions made by engineering technologists are essential to the success of companies, organizations and the nation's economy in general. Recognising the important contributions of engineering technologist in Malaysia's transformation into a knowledge economy, a group of institutions had initiated the formation of a society to be a leading voice for engineering technologists and technicians. This society aims to promote the profession of engineering technology and to provide a powerful platform for its members to gain due recognitions from employers, academia, accreditation authorities and other influential individuals and bodies.

MISSION & Objectives

MISSION

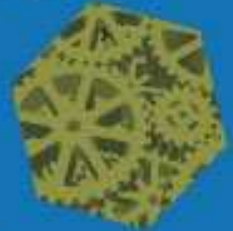

To advance the profession of engineering technology in all engineering disciplines and the professional recognition of Engineering Technologists in a manner that serves and protects the interests of industry, its members and general public.

objectives

- 1) To promote the profession of engineering technology in all engineering disciplines.
- 2) To foster interest in, and better understanding of engineering technologists by industry and the public at large by providing and promoting information, discussion, workshops and seminars.
- 3) To enhance career and professional development of all Engineering Technologist.
- 4) To obtain due recognition for the profession of engineering technology and of engineering technology education and training.
- 5) To promote the development and enhancement of technopreneurship activities in the area of engineering technology.
- 6) To organise activities for the continuous professional development of its members.
- 6) To enhance the Engineering Technologist advancement through research and development.

▶▶▶ **benefits for mset membership:**

- ① **Become a part of the voice of the profession.**

Alongside other members you will help us gain a strong voice to drive the industry forward and change the future.

- ① **Able to network and interact with other members**

- ① **Able to participate in professional development activities through courses, seminars and workshops**
